

One-Task Experiment Card

A calm, seven-day AI work experiment — one task, one boundary, one honest review.

START WITH A TASK YOU CAN LEARN FROM

Choose something repeated, reversible, and reviewable. Avoid confidential, regulated, high-stakes, or person-affecting decisions for a first experiment.

THE PURPOSE IS LEARNING, NOT PROVING

A useful result may be Keep, Change, or Stop. You do not need to automate everything or make a large decision today.

1. THE TASK I WILL TEST

Name one task you already repeat. What is the smallest useful first output?

2. PURPOSE

What specific result am I seeking? Keep it to a first draft, outline, question set, or checklist — not a final decision.

3. INFORMATION STAYS OUTSIDE

Name categories only. Do not write private, customer, account, confidential, or unapproved information here.

4. I WILL PERSONALLY DECIDE

What will I verify, approve, or decide before I use the output?

5. ONE WORKABLE CONDITION

Choose one optional adjustment that makes the task easier to begin or return to.

OPTIONAL WORKABLE CONDITIONS

- ☐ Written agenda before a meeting
- ☐ Fewer nonessential alerts while reviewing
- ☐ A clearer time or place for re-entry

- ☐ Quiet review window between calls
- ☐ Next action written before changing context
- ☐ Another adjustment:

AFTER SEVEN DAYS, MAKE ONE HONEST DECISION

- ☐ Keep: it is useful within the boundary.
- ☐ Change: revise the task, boundary, or condition.
- ☐ Stop: it adds more burden than value.

What did I learn?

This voluntary educational worksheet does not provide employment, legal, security, accessibility, financial, health, or medical advice. Do not enter confidential, regulated, customer, account, or personal information into a tool unless the route and use are approved for that context.

BEACON MOMENTUM · Choose one task. Learn from one week of real use.
